

TRUE BLOOD

From time to time, it's fun to get goosebumps with a spooky vampire story. The most famous vampire is **Dracula**, the hero of **Bram Stoker's** book from 1897. Dracula is a fictional character, but the word vampire also describes real creatures. Vampire bats are a species of small bat that feed on blood. They don't suck the blood like in the stories, but lick it from larger animals after a tiny bite. Other than that, they cause no harm. Definitely not scary enough to compete with Dracula!
